EDUCATION

Centurion University of Technology and Management

Bachelor of Technology in Mechanical Engineering; CGPA: 8.33

Bhubaneswar, India

May 2014 – May 2018

EXPERIENCE

Accenture

Senior Analyst

Kolkata, West Bengal

Nov 2024 – Present

- **Full Stack Architecture (BPCL Project):** Engineered end-to-end features for the BPCL project, utilizing Next.js and React for responsive frontend interfaces and Node.js for robust backend microservices to handle peak daily traffic.
- **Performance & Caching:** Identified and resolved database bottlenecks by implementing Redis caching layers for frequently accessed configuration data, significantly improving overall application response times.
- **Testing & CI/CD:** Authored comprehensive test suites using Jest for backend APIs and React Testing Library for frontend components, integrating them into the deployment pipeline to catch regressions early.

Team Geek Solutions

Software Developer

Pune, Maharashtra (Remote)

Dec 2023 – Sept 2024

- **Event-Driven Architecture:** Engineered an event-driven background job processing system for the Evaluate.AI Platform using Node.js, improving overall server throughput by 20% and ensuring robust, asynchronous message handling.
- **Scalable Architecture:** Designed RESTful API contracts to standardize data flow across the platform, utilizing PostgreSQL to efficiently manage and relate millions of data points for AI evaluation.

Newgen Software Technologies

Senior Software Design Engineer - 2

Noida, UP

Jan 2022 – Dec 2023

- **Interface Designer App (Full Stack):** Developed scalable RESTful APIs and collaborated on React-based SPA interfaces, ensuring seamless data flow and a cohesive user experience across the custom onboarding platform.
- **Database Operations:** Architected and optimized dynamic database queries to efficiently handle client data, improving data retrieval speeds by 30% within a high-traffic microservices environment.
- **Team Collaboration:** Led independent module deployments and mentored junior engineers on API integrations, fostering a culture of technical excellence within the microservices team.

PROJECTS

Gatekeeper | [Live Site](#) | [GitHub](#)

- **Overview:** A production-grade, distributed rate limiting middleware for Express APIs.
- Developed 3 algorithms (Fixed Window, Sliding Window, Token Bucket) backed by Redis Lua scripts to guarantee atomic operations and prevent race conditions across multiple servers.
- Designed a resilient fail-open architecture to ensure high API availability, distributed as an open-source npm package with zero-dependency in-memory fallbacks.

create-api-starterkit | [Live Site](#) | [GitHub](#)

- **Overview:** A developer CLI tool to instantly scaffold scalable, production-ready Node.js backends.
- Architected a reusable backend template using TypeScript and Express, reducing initial setup time for microservices by over 50%.
- Pre-configured enterprise patterns including structured logging, centralized error handling, Swagger documentation, Zod validation, and Dockerized deployments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

Frontend Technologies: React.js, Next.js, Redux, Tailwind CSS, SPA Development

Backend Frameworks: Node.js, Express.js, NestJS, RESTful APIs, GraphQL, Microservices, JWT, WebSockets

Cloud & DevOps (Transferrable): Azure Cloud (Familiarity), CI/CD, Docker, Git, Jest

Databases: PostgreSQL, Redis, NoSQL

Tools & Fundamentals: Postman, System Design, Data Structures, Algorithms, 12-Factor App Principles
